

Theme : HEALTHCARE

PS : Early Disease Prediction System:  
Develop a model that predicts heart  
disease based on patient data (age,  
BMI, glucose  
levels, etc.).

Team Debuggers

*Presenting to you*

# CARDIOSENSE.AI

AI-POWERED HEART DISEASE PREDICTION SYSTEM

# Introduction

Heart disease is the leading cause of death worldwide, often going undetected due to high healthcare costs and limited access to regular checkups. Traditional diagnostics require specialists and expensive tests, making early detection challenging.

**CardioSense.AI is an AI-powered solution that offers an accessible, cost-effective, and efficient way to predict heart disease early, enabling proactive health measures.**

## Problem Statement

Limited accessibility to regular medical checkups.

Expensive and time-consuming traditional diagnosis

Lack of early detection tools leading to severe complications

Need for an AI-powered system to provide risk assessment

# Our Solution – CardioSense.AI

AI-based heart disease risk prediction using key health indicators

Instant Yes/No risk prediction with a personalized risk score

AI chatbot for real-time health guidance and lifestyle recommendations

Downloadable health reports for easy medical consultation

## Key Features

- AI-driven heart disease prediction using XGBoost with high accuracy
- Binary risk prediction (Yes/No) with an explanatory risk percentage.
- Personalized recommendations based on individual risk factors.
- AI Chatbot for 24/7 user assistance & answering health-related queries.
- Downloadable PDF health reports for medical consultation.

## Our Objectives

- Provide an easy-to-use AI-powered risk assessment tool.
- Reduce dependency on expensive medical tests.
- Help users take preventive healthcare measures early.
- Support hospitals, telemedicine, and corporate wellness programs.

# How it works?

CardioSense.AI follows a structured approach in predicting heart disease risk. The system takes user inputs, processes them through an AI model, and provides instant results with actionable recommendations.

## System Workflow

1

### User Input

Users enter health parameters (BMI, smoking status, age, etc.).

2

### Data Preprocessing & Feature Selection

Data is cleaned & key features selected.

3

### XGBoost Model Processing

AI model predicts heart disease risk.

4

### Prediction Output

Displays Yes/No risk level & risk percentage.

5

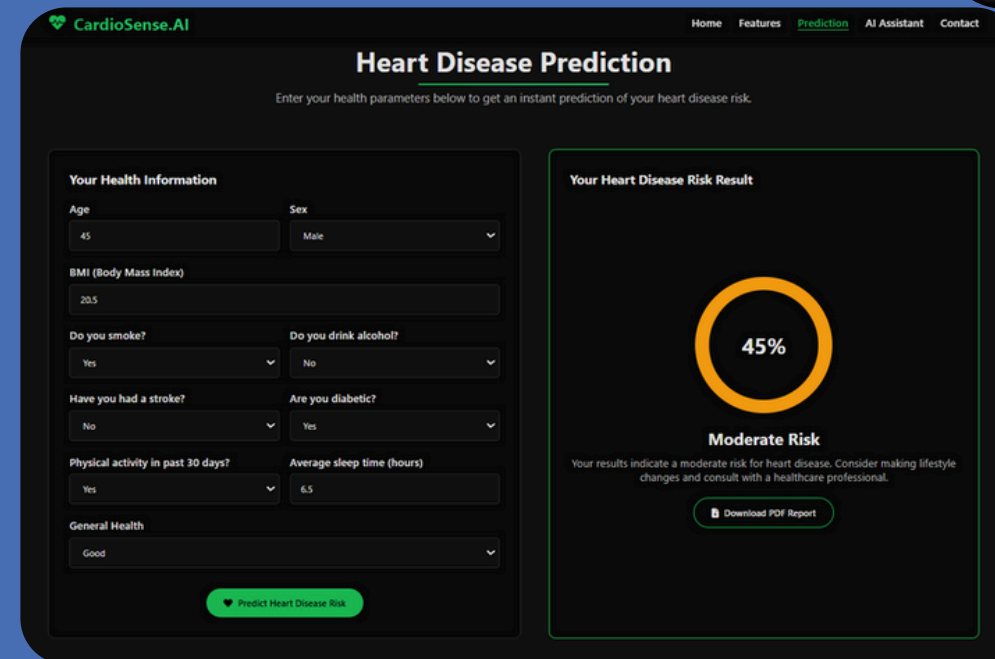

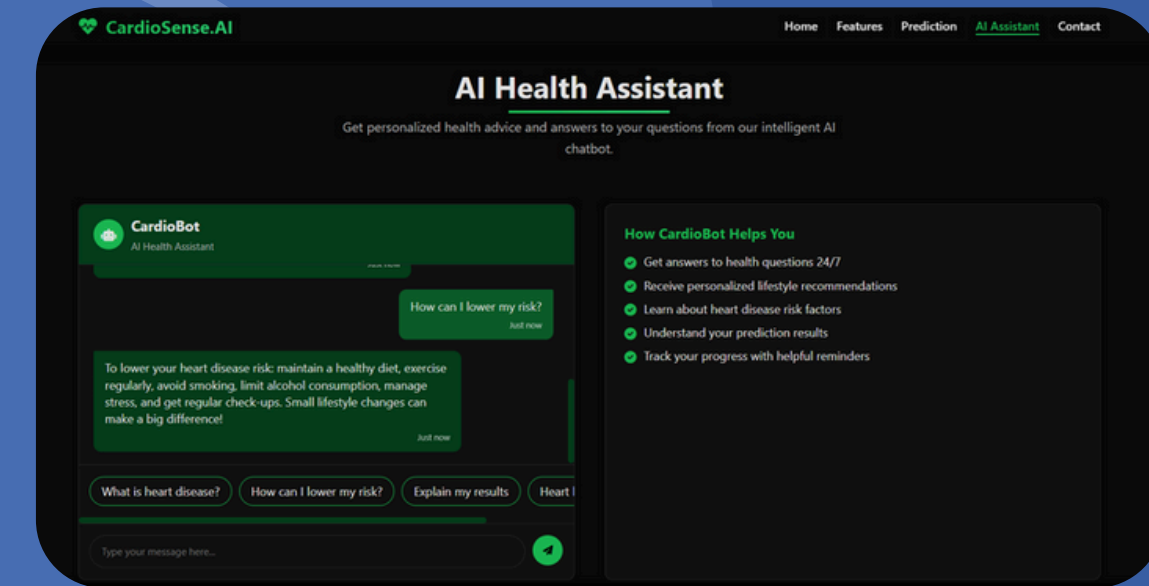

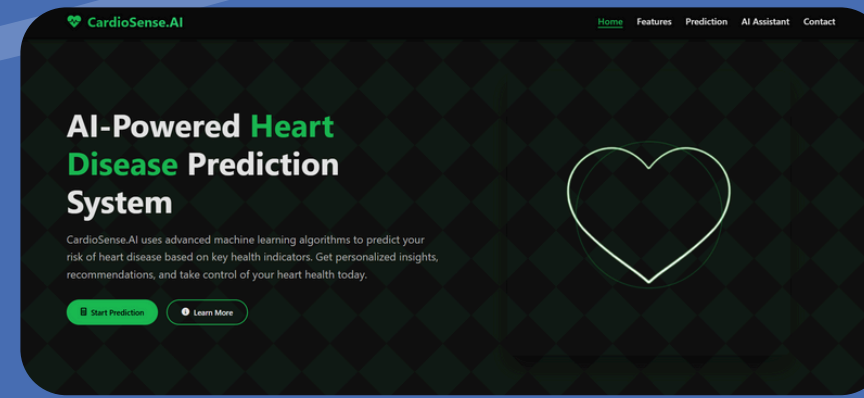

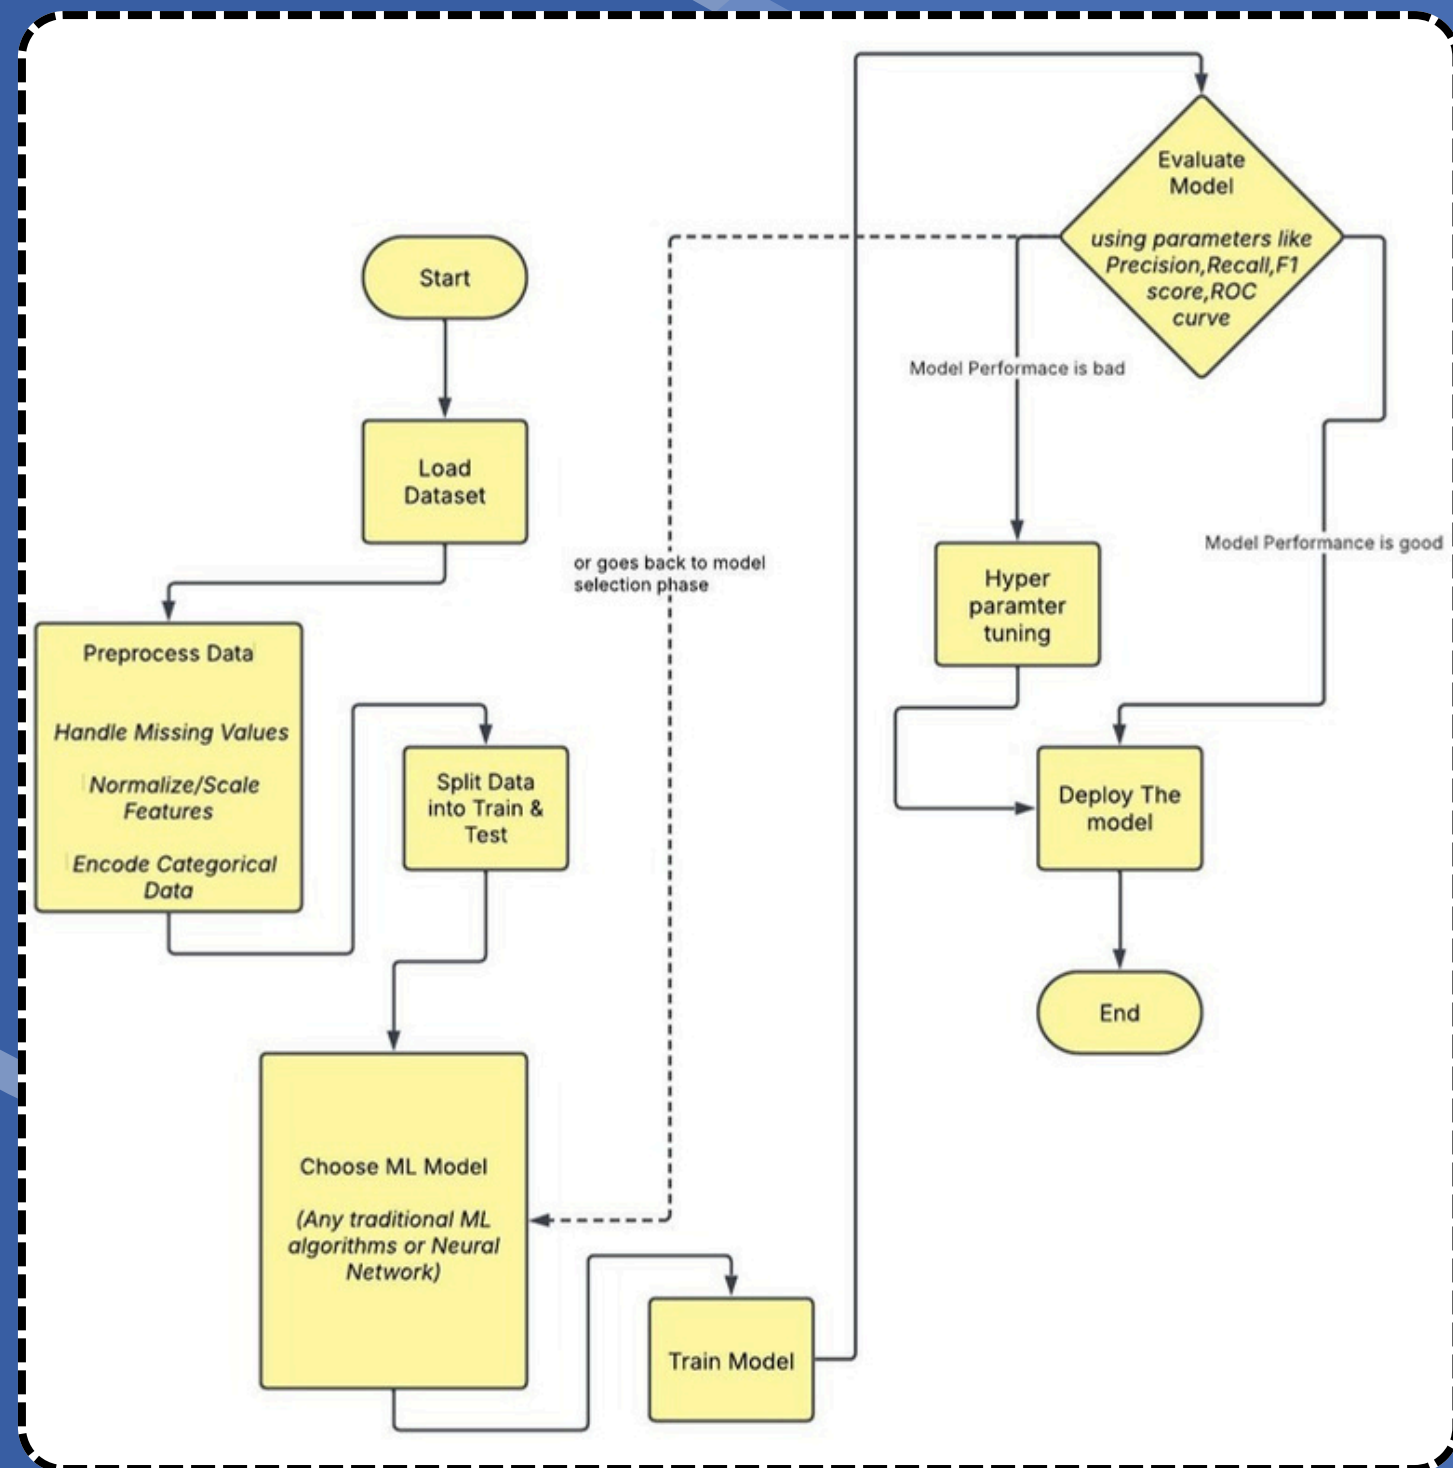

### AI Chatbot & Report Generation

Provides real-time guidance & downloadable reports.

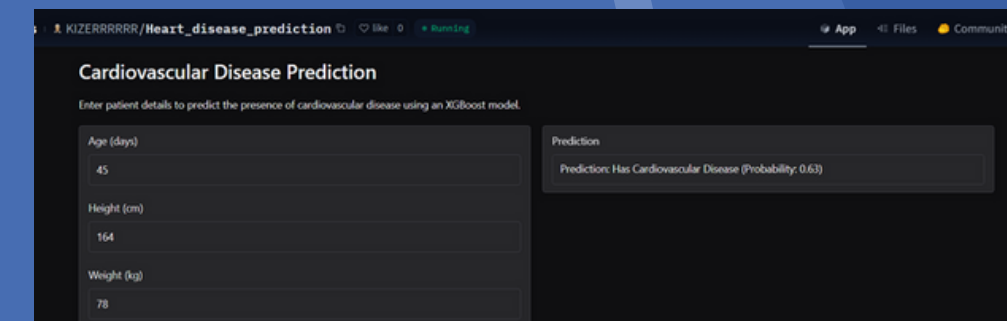

# Prototype & System Architecture

## Prototype

Our ML Model Prototype Video : <https://youtu.be/6ttrmFLYMTg>

# Impact & Benefits

## Key Benefits

### Early Detection

Reduces the risk of late-stage heart disease

### Affordable & Accessible

No need for costly medical tests

### Scalability

Can be integrated into hospitals, telemedicine platforms, and corporate wellness programs.

### User Empowerment

Encourages preventive healthcare behavior.

## Real-World Impact Stats

Our Model DataSet Link :

<https://www.kaggle.com/datasets/sulianova/cardiovascular-disease-dataset>

Impact Category	Expected Improvement
Reduction in Heart Disease Mortality	25%
Increase in Preventive Checkups	50%
Healthcare Cost Savings	30-40%

# Why Choose Us?

## High Accuracy

AI-powered  
predictions with  
high accuracy

## Personalized Health Reports

Unlike generic models,  
CardioSense.AI gives  
tailored health suggestions.

## AI Chatbot Integration

Provides real-  
time support for  
user queries

## Affordable & Accessible

Makes early-  
stage diagnosis  
possible for all
